

Details

When your overnight trips start turning into overland excursions, you need gear that matches your thirst for adventure. The MT35 is built to keep your grub fresh or frozen when you head off the grid.

All Engel fridge/freezers feature the Engel Swing Motor Compressor. Highly efficient, it typically draws around 1 to 2 Amps per hour (check the specs below), about 40% less than a traditional compressor.

Engel fridge/freezers run on battery power (12V/24V DC) or 110V/120V AC, so whether you're on the road, on the water or safe at home, you can use your Engel to make life a little easier.
